Languages

- English
- Russia (Native)

Technologies

Front-end

- HTML / CSS / JavaScript
- React / Redux
- Sass / BEM / CSS Modules
- CSS-in-JS (styled-components, Emotion)
- Webpack

Back-end

- Node.js / Elixir
- GraphQL
- SQL / NoSQL

Other

- Git / Linux
- Jest / Cypress

Profile

I've started learning Front-end in 2017 using resources from the Internet. At the moment I'm also learning Back-end and UI/UX Design. In my projects, I'm trying to use minimal packages because I want to understand and solve a problem by myself. If I use some package I often look at the source code to understand how it works. I want to find a team where I'll be comfortable and will be able to improve my skills.

I expect from the job:

- Interesting projects
- Collegues developers who are always improving
- Team work
- Well designed products
- Appreciation of user experience

Skills

- Unit testing
- Documenting code
- Optimizing performance
- Easily understand other's code and adapting to their style
- Code review
- UX / UI
- CI / CD
- Functional programming

Alexey Ryabov

Front-end Developer

Experience

○ Front-end Engineer, 8base

Apr. 2019 - June 2020 · 1 year 3 months

8base is a GraphQL Backend-as-a-Service. I was responsible for developing projects using their platform. I was modeling relational database schemas, creating API using 8base and implementing interfaces by designs.

○ Front-end Engineer, Profiles

Oct. 2018 - Feb. 2019 · 5 months

Profiles is a service for specialists from different domains. Users can easily find some specialists and the specialists can engage users. I was responsible for developing front-end of Profiles.
